

*2001 Volvo SCC*

### *Safety Concept Car (SCC)*

A surprising prototype at the 2001 show was the Volvo Safety Concept Car (SCC), which featured innovating passive safety ideas. The driver could see through the A-posts, which used see-through Plexiglas in a steel box construction, and the B-posts curved inwards at the top for unobstructed field of vision to the offset rear. Embedded in the door mirrors and rear bumper were sensors that alerted the driver of approaching traffic in the "blind spot" to the offset rear.
